

**BLOOD GROUP
TEST REPORT**

Provided Information: Name: PANDORA AIDEN OF WIZARDGATE Registration: SBV 041021 120	Case: CAT155580 Date Received: 03-Dec-2025 Report Issue Date: 09-Dec-2025 Report ID: 9045-6570-4164-7095
DOB: 04/10/2021 Sex: Male Breed: Bombay Microchip: 900263001599976 Color: black	
Sire: TORILAND ASHTON ISHKABIBBLE	Dam: CARNEY PRECIOUSJEWELS
Reg:	Reg:
Microchip:	Microchip:

RESULT

INTERPRETATION

Blood Group	N/N
--------------------	------------

No copies of known variants responsible for B or AB blood type detected.

BLOOD GROUP TEST REPORT

Client/Owner/Agent Information: EDWARD MANNING 10611 HAMPTON RD ROUGEMONT, NC 27572	Case: CAT155580 Date Received: 03-Dec-2025 Report Issue Date: 09-Dec-2025 Report ID: 9045-6570-4164-7095
<p>Verify report at vgl.ucdavis.edu/verify</p> <p>Name: PANDORA AIDEN OF WIZARDGATE</p>	

Additional Information

If testing for a disease or a disorder was performed and results indicate the animal is affected or at risk, we recommend contacting your veterinarian for further clinical evaluation and for additional information on disease and management.

For more detailed information on Blood Group test results, please visit our website at:
vgl.ucdavis.edu/test/bloodgroup-cat

For terms and conditions of testing, please see vgl.ucdavis.edu/about/terms-and-conditions

Results are determined using PCR-based methods. The results relate only to the sample tested as identified by the submitter (for example, identity and/or breed).

Feline AB Blood Group

The feline AB blood group test is designed to detect specific genetic variants that result in blood types B (genetic variants b1, b2 and b3) and AB (genetic variant c). The absence of those variants is reported as N.

In most cases, the N allele corresponds to the common, unchanged gene that results in blood type A. However, occasionally, one or both N alleles may correspond to a rare and yet unknown AB and/or B type allele. Since these are unknown, there is no way to test for them.

The table below shows the resulting blood type for each possible genotype reported.

Genotype	Blood type
N/N	Most likely blood type A*
N/c	Most likely blood type A* (carrier of type AB)
N/b1	Most likely blood type A* (carrier of type B)
N/b2	Most likely blood type A* (carrier of type B)
N/b3	Most likely blood type A* (carrier of type B)
c/c	Blood type AB
c/b1	Blood type AB (carrier of type B)
c/b2	Blood type AB (carrier of type B)
c/b3	Blood type AB (carrier of type B)
b1/b1	Blood type B
b1/b2	Blood type B
b1/b3	Blood type B
b2/b3	Blood type B

* The blood group test is designed to detect specific genetic variants that result in blood types B and AB. The absence of those variants is reported as N. In most cases, the N allele corresponds to the common, unchanged gene that results in blood type A. However, occasionally, one or both N alleles may correspond to a rare and yet unknown AB and/or B type allele.
